SUMMARY

Final-year AI & ML engineering student with a strong foundation in Python, machine learning, deep learning, and data analytics. Building intelligent systems that ship — from ML-powered lead intelligence platforms to national-hackathon-winning AI products — with a focus on predictive modelling and data-driven solutions to real-world problems. Passionate about continuously learning emerging AI technologies, and seeking opportunities to grow as a skilled AI engineer.

EXPERIENCE

AI Engineer Intern
Reworked.AI (ReworkedREI LLC)

May 2025 – September 2025
Remote

- Developed ML components for Betty Score, Reworked.AI's proprietary lead scoring engine that processes property datasets for roofing, solar, and real estate investor verticals and ranks homeowner leads by conversion likelihood.
- Built and maintained data pipelines that ingested structured property files (owner name, mailing address, ZIP code) through a JWT-authenticated REST API (/process-leads), applying cleaning, feature engineering, and predictive modelling across ~10,000 records per batch.
- Integrated the scoring system with an async callback architecture — processing jobs dispatched file results to client callback URLs on completion, supporting 5+ concurrent client integrations.
- Performed statistical analysis and EDA to identify signal features driving lead quality across three industry verticals (ROOFING, SOLAR_INSTALLER, REAL_ESTATE_INVESTORS), improving scoring precision by ~5%.
- Translated model outputs into business-ready lead rankings consumed directly by client sales workflows, reducing manual lead qualification effort.

PROJECTS

Bank Statement Extraction & Chart of Accounts Mapping | Python, LLM APIs, OCR
Agentic-2.0 National Hackathon — 1st Place, IIIT SriCity

2026
github.com/himeshkota07

- Built an LLM-powered pipeline to parse unstructured bank statement PDFs (scanned and digital) and automatically classify transactions against a Chart of Accounts schema — won first place at a national-level hackathon.
- Combined OCR preprocessing with regex normalisation for multi-format PDF handling and applied structured prompting to maximise classification accuracy across varied bank statement layouts.

Vision and ML Based Adaptive Traffic Signal Control | YOLOv8, Python, OpenCV
B.N.M. Institute of Technology

2024
github.com/himeshkota07

- Deployed YOLOv8 with the UA-DETRAC benchmark to estimate lane-wise vehicle density in real time and feed a fairness-aware signal controller that dynamically optimises cycle timings.
- Validated through simulation-based evaluation, demonstrating measurable reduction in average vehicle waiting time versus a fixed-cycle baseline.

Serverless ChatBot Application | Python, AWS Lambda, API Gateway
Personal Project

2024
github.com/himeshkota07

- Built and deployed a conversational chatbot on AWS Lambda and API Gateway, demonstrating end-to-end serverless architecture, REST API integration, and cloud deployment.

TECHNICAL SKILLS

Languages:	Python, Java, SQL
ML / AI:	scikit-learn, TensorFlow, PyTorch, YOLOv8, Deep Learning, NLP, LLM APIs, Predictive Modelling
Data:	Pandas, NumPy, Matplotlib, Seaborn, EDA, Feature Engineering
Cloud / Tools:	AWS (Lambda, API Gateway), REST APIs, JWT Auth, Git, GitHub, Jupyter

EDUCATION

Bachelor of Engineering — Artificial Intelligence and Machine Learning
B.N.M. Institute of Technology, Bangalore

2023 – Present
CGPA: 9.16 / 10.00 (Semesters 1–6)

Class XII — Science
Sri Sathya Sai Higher Secondary School, Puttaparthi

2021 – 2023
88%

ACHIEVEMENTS

- 1st Place — Agentic-2.0 National Hackathon, IIIT SriCity · Problem: Bank statement data extraction to spreadsheet and CoA mapping (2026)
- Participant — HackVerse '25 National Hackathon, IBM SkillsBuild & 1M1B · Problem: CradleCare — AI-powered digital health tracking for infants and mothers (2025)

CERTIFICATIONS

- Python for Data Science — NumPy, Pandas, EDA, Data Visualisation (Online)
- JavaScript Fundamentals — Infosys Springboard (2024)
