SUMMARY

Final-year AI & ML engineering student with a strong foundation in Python, machine learning, deep learning, and data analytics. Building intelligent systems that ship — from ML-powered lead intelligence platforms to national-hackathon-winning AI products — with a focus on predictive modelling and data-driven solutions to real-world problems. Passionate about continuously learning emerging AI technologies, and seeking opportunities to grow as a skilled AI engineer.

EXPERIENCE

AI Engineer Intern

May 2025 – September 2025

Reworked.AI (ReworkedREI LLC)

Remote

- Developed ML components for Betty Score, Reworked.AI's proprietary lead scoring engine that processes property datasets for roofing, solar, and real estate investor verticals and ranks homeowner leads by conversion likelihood.
- Built and maintained data pipelines that ingested structured property files (owner name, mailing address, ZIP code) through a JWT-authenticated REST API (/process-leads), applying cleaning, feature engineering, and predictive modelling across incoming batches.
- Integrated the scoring system with an async callback architecture — processing jobs dispatched file results to client callback URLs on completion, supporting multiple concurrent client integrations.
- Performed statistical analysis and EDA to identify signal features driving lead quality across three industry verticals (Roofing, Solar Installer, Real Estate Investors), improving scoring precision.
- Translated model outputs into business-ready lead rankings consumed directly by client sales workflows, reducing manual lead qualification effort.

PROJECTS

ResearchPilot AI | React, FastAPI, LangChain, Mistral AI, ChromaDB

2026

Personal Project

researchpilot-wp6b.onrender.com

- Multi-agent AI research assistant that generates a structured summary, identifies research gaps, drafts a full analysis report, and lets users chat with an uploaded paper via RAG-grounded Q&A.
- Multi-agent pipeline for summarisation, gap analysis, and report generation using LangChain and Mistral AI (open-mistral-7b); RAG-grounded chat via Mistral embeddings and a ChromaDB vector store.

ClaimReady | Next.js, TypeScript, OpenAI API, Tailwind CSS, Vercel

2026

Personal Project

claimready-epfo.vercel.app

- Pre-flight validation for EPFO Provident Fund withdrawal claims — surfaces exactly what will fail and how to fix it before filing, instead of a 15–20 day wait ending in a cryptic rejection.
- Deterministic rules engine (name-matching, KYC checks, form eligibility) paired with an OpenAI model for judgment-based tasks like decoding rejection text and reading uploaded documents; drafts grievance letters in English, Hindi, or Kannada.

Bank Statement Extraction & Chart of Accounts Mapping | Python, LLM APIs, OCR

2026

Agentica-2.0 National Hackathon — 1st Place, IIIT SriCity

github.com/himeshkota07

- Built an LLM-powered pipeline to parse unstructured bank statement PDFs (scanned and digital) and automatically classify transactions against a Chart of Accounts schema — won first place at a national-level hackathon.
- Combined OCR preprocessing with regex normalisation for multi-format PDF handling and applied structured prompting to maximise classification accuracy across varied bank statement layouts.

Vision and ML Based Adaptive Traffic Signal Control | YOLOv8, Python, OpenCV

2024

B.N.M. Institute of Technology

github.com/himeshkota07

- Deployed YOLOv8 with the UA-DETRAC benchmark to estimate lane-wise vehicle density in real time and feed a fairness-aware signal controller that dynamically optimises cycle timings, validated through simulation-based evaluation against a fixed-cycle baseline.

GPA — Graphical Password Authentication | React, Node.js, Express, MongoDB

2024

Personal Project

graphical-auth-client.vercel.app

- Adds a second authentication factor to alphanumeric passwords via a personalised sequence of images (Unsplash API), with client-side encryption (crypto-js) and JWT/bcrypt-secured credentials on the backend — aimed at higher-security logins for banking, e-commerce, or social media.

Additional Projects: Dayflow · Kalike — Inclusive Learning Platform · Serverless ChatBot Application

TECHNICAL SKILLS

Languages:	Python, Java, SQL, TypeScript
ML / AI:	scikit-learn, TensorFlow, PyTorch, YOLOv8, Deep Learning, NLP, LLM APIs, Predictive Modelling, LangChain, OpenAI API, Mistral AI, OpenCV, OCR
Data:	Pandas, NumPy, Matplotlib, Seaborn, EDA, Feature Engineering, ChromaDB, MongoDB
Frontend / Web:	React, Next.js, Vite, React Router, Tailwind CSS, jsPDF, Framer Motion, react-i18next, FontAwesome, Axios
Cloud / Tools:	AWS Lambda, API Gateway, REST APIs, JWT Auth, Git, GitHub, Jupyter, FastAPI, Vercel, Node.js, Express, bcrypt, crypto-js, Nodemailer, Swagger, Unsplash API

EDUCATION

Bachelor of Engineering — Artificial Intelligence and Machine Learning

2023 – Present

B.N.M. Institute of Technology, Bangalore

CGPA: 9.16 / 10.00 (Semesters 1–6)

Class XII — Science

2021 – 2023

Sri Sathya Sai Higher Secondary School, Puttaparthi

88%

ACHIEVEMENTS

- 1st Place — Agentica-2.0 National Hackathon, IIIT SriCity · Problem: Bank statement data extraction to spreadsheet and CoA mapping (2026)
- Participant — HackVerse '25 National Hackathon, IBM SkillsBuild & 1M1B · Problem: CradleCare — AI-powered digital health tracking for infants and mothers (2025)

CERTIFICATIONS

- Python for Data Science — Infosys Springboard (Apr 2026)
- BI — Business Intelligence — Infosys Springboard (Apr 2026)
- Introduction to Natural Language Processing — Infosys Springboard (Apr 2026)
- Overview of Business Analytics using WEKA — Infosys Springboard (Mar 2026)
- Salesforce Tableau Data Analyst/Specialist Desktop Cert Prep — Udemy (Jul 2026)
- Power BI Business Scenarios with Hands-on Use Cases — Udemy (Jul 2026)
- The Complete Power BI Practical Course 2026 — Udemy (Jul 2026)
